## Homework 2

Posted Monday 26 August 2013. Due 5pm Wednesday 4 September 2013.

2. [25 points]

Suppose  $N \geq 1$  is an integer and define  $h = 1/(N + 1)$  and  $x_j = jh$  for  $j = 0, \dots, N + 1$ . Consider the  $N + 2$  hat functions, defined for  $x \in [0, 1]$  as

$$\phi_k(x) = \begin{cases} (x - x_{k-1})/h, & x \in [x_{k-1}, x_k]; \\ (x_{k+1} - x)/h, & x \in [x_k, x_{k+1}); \\ 0, & \text{otherwise;} \end{cases}$$

for  $k = 1, \dots, N$ , with

$$\phi_0(x) = \begin{cases} (x_1 - x)/h, & x \in [x_0, x_1); \\ 0, & \text{otherwise;} \end{cases}$$

and

$$\phi_{N+1}(x) = \begin{cases} (x - x_N)/h, & x \in [x_N, x_{N+1}]; \\ 0, & \text{otherwise.} \end{cases}$$

We call these piecewise linear functions *hat functions* because of their shape. They will be important functions later in the course. For example, when  $N = 9$  and  $k = 3$ , this function takes the following form.

- (a) Write a MATLAB function for  $\phi_k(x)$ . It should take in as input  $x$ ,  $k$ , and  $N$ . It should return the value  $\phi_k(x)$ . It should also be able to take in a vector for  $\mathbf{x} = (\hat{x}_1, \dots, \hat{x}_m)$  and return the vector  $\phi_k(\mathbf{x}) = (\phi_k(\hat{x}_1), \dots, \phi_k(\hat{x}_m))$ .
- (b) Let  $N = 9$ . Plot  $\phi_0(x), \phi_4(x), \phi_5(x), \phi_6(x), \phi_{10}(x)$  on the same figure. Make sure to:
- plot each function with a different color;
  - label the axes and provide a title;
  - create an accurate legend for the figure;
  - adjust the text sizes if necessary to make everything easily legible;
  - use the LATEX interpreter to make your labels, titles, and legend look stylish.
