CAAM 336 · DIFFERENTIAL EQUATIONS

Homework 16

Posted Wednesday 25 September 2013. Due 5pm Wednesday 2 October 2013.

16. [25 points]

Suppose $N \ge 1$ is an integer and define h = 1/(N+1) and $x_j = jh$ for j = 0, 1, ..., N+1. Consider the N hat functions $\phi_k \in C[0,1]$, defined as

$$\phi_k(x) = \begin{cases} \frac{x - x_{k-1}}{h} & \text{if } x \in [x_{k-1}, x_k); \\ \frac{x_{k+1} - x}{h} & \text{if } x \in [x_k, x_{k+1}); \\ 0 & \text{otherwise}; \end{cases}$$

for $k=1,\ldots,N$. Let the inner product $(\cdot,\cdot): C[0,1]\times C[0,1]\to\mathbb{R}$ be defined by

$$(u,v) = \int_0^1 u(x)v(x) dx$$

and let the norm $\|\cdot\|: C[0,1] \to \mathbb{R}$ be defined by

$$||u|| = \sqrt{(u, u)}.$$

- (a) For j = 1, ..., N, what is $\phi_j(x_k)$ for k = 0, 1, ..., N+1? Simplify your answer as much as possible.
- (b) Show that $\{\phi_1, \ldots, \phi_N\}$ is linearly independent by showing that if $c_k \in \mathbb{R}$ and $\sum_{k=1}^N c_k \phi_k(x) = 0$ for all $x \in [0, 1]$ then $c_k = 0$ for $k = 1, \ldots, N$.
- (c) For $f(x) = \sin(\pi x)$, compute by hand the inner products (f, ϕ_j) for $j = 1, \dots, N$.
- (d) Compute by hand the inner products (ϕ_j, ϕ_k) for j, k = 1, ..., N. Your final answers should be simplified as much as possible and in your formulas h should be left as h and not be replaced with 1/(N+1). You must clearly state which values of j and k each formula you obtain is valid for. An acceptable way to present the final answer would be: For j, k = 1, ..., N,

$$(\phi_j, \phi_k) = \begin{cases} ? & \text{if } k = j, \\ ? & \text{if } |j - k| = 1, \\ ? & \text{otherwise.} \end{cases}$$

with the question marks replaced with the correct values. Hint:

$$\int_{x_{j-1}}^{x_j} \left(\frac{x - x_{j-1}}{h} \right)^2 dx = \frac{1}{h^2} \int_{x_{j-1} - x_{j-1}}^{x_j - x_{j-1}} \left(s + x_{j-1} - x_{j-1} \right)^2 ds = \frac{1}{h^2} \int_0^h s^2 ds$$

where $s = x - x_{i-1}$.

(e) Use your solutions to (c) and (d) to set up a linear system (in MATLAB) and solve it to compute the best approximations $f_N(x)$ to $f(x) = \sin(\pi x)$ from $\operatorname{span}\{\phi_1, \ldots, \phi_N\}$ with respect to the norm $\|\cdot\|$ for N=3 and N=9. For each of these N, produce one plot that compares $f_N(x)$ to f(x), and a second plot that shows the error $f(x) - f_N(x)$. The hat.m code (from Homework 2, either your code or the code from the solutions) should help you to produce these plots.
